

17. The call router system of claim 14 wherein routing rules are maintained at the individual computer workstation and the router requests routing from the individual computer workstation.

18. The call router system of claim 14 wherein routing rules for connected computer workstation are maintained separately on the processor connected to the LAN that executes the router, and wherein routing is accessed from the routing rules according to destination information for received calls.

#### REMARKS

The present amendment is a preliminary amendment to the above-referenced patent application, and the applicants respectfully request that the amendments to the claims and specification be made prior to search and first examination of the patent application.

Respectfully Submitted,

Igor Neyman, et al.
